

10 (or 11) year reunion for Woodleigh Students.

Woodleigh School Students who graduated in 1996 and 1997 from what was then known as St Paul's School 'Woodleigh' are encouraged to return to the Baxter campus on Sunday, 16 September from 1.30pm for a get together and catch up of old friends.

Whilst it probably doesn't seem so, ten (or eleven) years is a long time, and days such as these prove to be great fun for all who make it along.

So bring your families and your partners and regale them with tales of Happy Buses and Hattah, the 'Three R's' and the 'One percenters'...

There'll be a BBQ on, and BYO drinks.

Remember families & partners are very welcome!

If you can make it, please RSVP by September 12 to the school on 5971 1108 or email to aliddiard@woodleigh.vic.edu.au and we'll see you there!

Focusing on Life Long Skills at St Leonard's

A few years ago St Leonard's College identified a need for students to develop lifelong skills, knowledge and an appreciation of sustainability issues. The College's campus at Patterson River (ELC to year 10) has become the focus of a unique curriculum that now incorporates sustainability programs into all aspects of campus life.

Sustainability relates to ways of thinking about the world & forms of social and personal practice.

Fundamental to the notion of educating for sustainability is the belief that every individual is capable of making a difference in a positive way.

They have an extensive program of student leadership and a well established program of community service which see students working on a weekly basis in nursing homes, opportunity shops, animal shelters and adopting a number of social service organisations including the support of a World Vision child.

ELC TO YEAR 6 PROGRAM

St Leonard's are now accredited to present the IB Primary Years Programme which allows them to consolidate their global outlook. Primary students design gardens, care for baby animals, help with recycling and work with their older 'buddies' in projects around the school.

In addition, there is a special EcoKids project for our year 3 and 4 students. All of their studies are taught in context of the environment. They have their own kitchen garden where they plan, plant, cook and eat their produce.

SECONDARY PROGRAM

In addition, to their multidisciplinary program, all year 7 and 8 students study environmental education. All year 9 and 10 students work with teachers and the school chaplain in a global sustainability program. They explore big issues in the world such as wealth and poverty and its connection to terrorism, global economics, effects of global warming, impacts of civil wars and other current issues as they arise.

In 2006 the new sustainability centre was constructed to provide a place for research and reflection on these and other issues. This is a centre displaying the latest environmentally friendly building design and building technology.

For more information to inquire about enrolling at St Leonard's College, please contact the Community Relations Office on 9592 2266 or email enrolment@stleonards.vic.edu.au

Come and see what makes our exceptional facilities and curriculum so special!

Our campus at Patterson River is a world leader in its sustainable education program and is ensuring the future is in good hands.

Shouldn't you consider this too?
